

## EU-LIFE Core Facilities Benchmarking Survey Report<sup>1</sup>

### Abstract

The EU-LIFE Core Facilities benchmarking report contains a comprehensive comparison of the information collected from the core facilities at the EU-LIFE member institutes through a benchmarking survey carried out in 2020.

The report contains information on financial and operational models, staff indicators and careers in the field. The detailed analysis of both the quantitative and qualitative information has permitted to compare the operational practices, as well as the quantitative investment in, and support for, both core facilities infrastructure and staff.

This benchmarking report is first and foremost to be considered as an internal reference tool for EU-LIFE member institutes to compare themselves to each other and to help institutes and core facilities to improve their performance. It has been completed by the concerted effort of the [Core Facilities Working Group](#) and individual Core Facility managers.
